

Exercise No: 5

Date: 04/08/2026

INTRODUCTION TO MAVEN

AIM:

To develop a Java Maven project that reads an mp3 audio file and extracts the artist's name from the metadata of the mp3 file

PROGRAM:

A screenshot of an IDE showing the Main.java file. The code defines a package 'sample' and imports 'java.nio.file.Path' and 'java.nio.file.Paths'. It contains a 'Main' class with a 'main' method. The 'main' method checks if arguments are provided, prints usage if not, and then uses 'Paths.get' to get the file path. It calls 'sub.getArtist' to extract the artist name from the mp3 file metadata and prints it, or an error message if it fails.

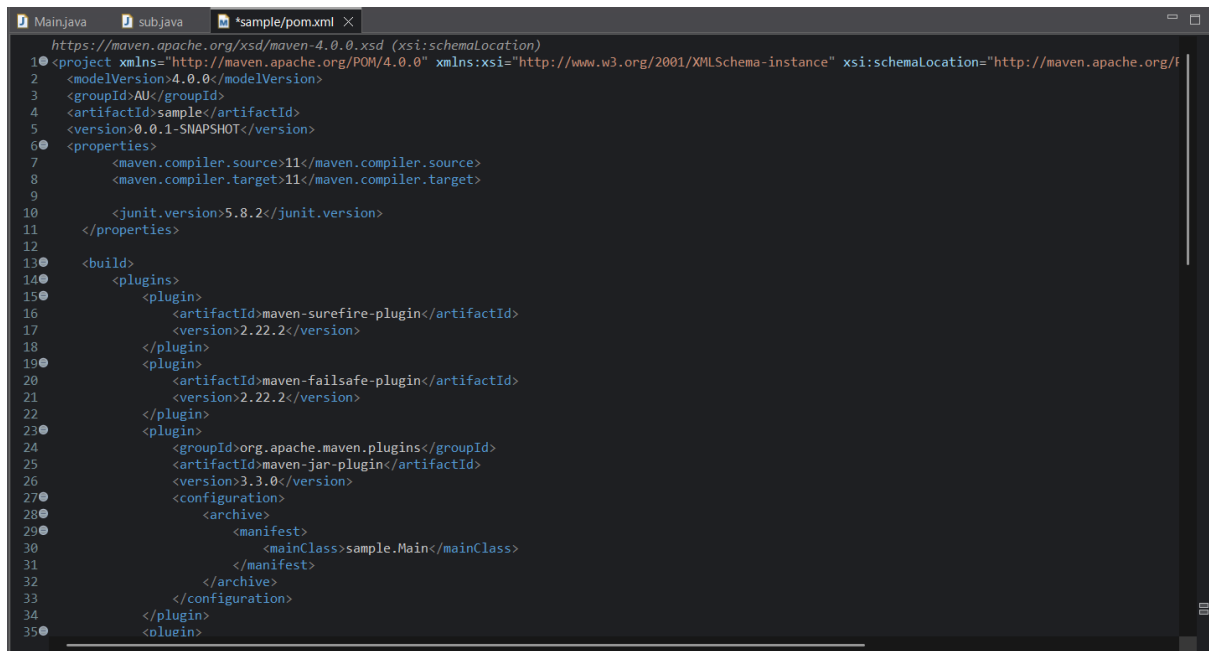

```
1 package sample;
2 import java.nio.file.Path;
3 import java.nio.file.Paths;
4 public class Main {
5     public static void main(String[] args) {
6         if (args.length < 1) {
7             System.out.println("Usage: Mp3Util <path-to-mp3-file>");
8             return;
9         }
10        Path mp3Path = Paths.get(args[0]);
11        String artist = sub.getArtist(mp3Path);
12        if (artist != null) {
13            System.out.println("Artist: " + artist);
14        } else {
15            System.out.println("Could not read artist from: " + mp3Path);
16        }
17    }
18 }
19 |
```

Main.java

A screenshot of an IDE showing the sub.java file. The code defines a package 'sample' and imports 'com.mpatric.mp3agic.*', 'java.io.IOException', and 'java.nio.file.Path'. It contains a 'sub' class with a 'getArtist' method. This method uses 'Mp3File' to open the file, gets the 'ID3v2' tag, and then the 'albumArtist' from it. It handles exceptions like 'IOException', 'UnsupportedTagException', and 'InvalidDataException'.

```
1 package sample;
2 import com.mpatric.mp3agic.*;
3 import java.io.IOException;
4 import java.nio.file.Path;
5 public class sub {
6     public static String getArtist(Path path) {
7         try {
8             Mp3File mp3file = new Mp3File(path);
9             ID3v2 id3v2Tag = mp3file.getId3v2Tag();
10            if (id3v2Tag != null) {
11                String albumArtist = id3v2Tag.getAlbumArtist();
12                return albumArtist != null ? albumArtist : id3v2Tag.getArtist();
13            }
14            return null;
15        } catch (IOException | UnsupportedTagException | InvalidDataException e) {
16            return null;
17        }
18    }
19 }
20 |
```

sub.java

```
